

Cognizer™ and 64 bit Windows

All editions of Cognizer are 32bit applications. They can all be installed and run on 64bit versions of Microsoft Windows including:

- Windows XP 64bit
- Windows Vista 64bit
- Windows 7 64bit

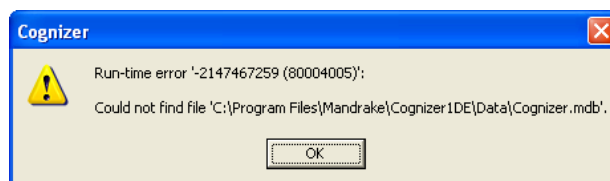

However when installing Cognizer on 64bit Windows, the Operating System may decide to install Cognizer in:

C:\Program Files (x86)\Mandrake\Cognizer<edition and version identification>

Rather than:

C:\Program Files\Mandrake\Cognizer<edition and version identification>

Cognizer needs to be installed in C:\Program Files to be able to run correctly. If it has not been installed here, the first time you run Cognizer you will see an error message similar to this:

To fix this problem simply copy:

C:\Program Files (x86)\Mandrake\Cognizer<edition and version identification>

To:

C:\Program Files\Mandrake\Cognizer<edition and version identification>

Note you may need to have administrative rights on your computer to do this.
